

JANUS et Cie®

BEYOND TOPIARY

The Ultra-Versatile American-Made Ensemble Designed for Durability

Expertly engineered in the U.S.A., the Tate collection is a comprehensive series built from powder coated aluminum frames and JANUSwood slats that are ideal for high-traffic commercial environments. The eco-friendly, synthetic JANUSwood used to create the planks is both stylish and resilient, created from post-consumer dairy bottle waste. This innovative, visionary material has undergone years of rigorous testing with constant exposure to the elements including the harsh, salt-air climate of South Florida. Crafted from these sustainable, recyclable materials, Tate is a striking example of design that exists in harmony with both consumer needs and environmental health.

Tate available in twenty finish combinations offers an expansive selection that can be mixed and matched to outfit any public space. Unique to the Tate collection are its adaptable tables, framed only on two sides, allowing many to be placed together to form one long, continuous table or group.
